Equipment Options & Pricing

Portable, Hardwired or Both

When choosing a system for your church or funeral home you have multiple equipment options for getting your webcast system up and running. Equipment can be hard wired into your facility for always ready convenience and improved aesthetics or a portable system can be setup for use as needed. Some clients invest in both systems for the ability to offer flexible webcast options such as graveside services, church funerals, or rental for special events such as weddings, business presentations, etc.
